Ladies and Gentlemen:

Pursuant to the Administrative Rules of Montana, 16.2.604,  
the following Preliminary Environmental Review has been prepared by the  
Department of Health and Environmental Sciences concerning Larry Salois  
dba Salois and Sons, Browning, MT.

The purpose of the Preliminary Environmental Review is to inform  
all interested governmental agencies, public groups or individuals of  
the proposed action and to determine whether or not the action may have  
a significant effect on the human environment. This Preliminary  
Environmental Review will be circulated for a period of fifteen (15)  
days at which time a decision will be made as to our future action.

If you care to comment on this proposed action, please do so within  
the allotted time.

Sincerely,

LARRY D. MITCHELL  
Solid Waste Management Bureau  
Environmental Sciences Division

PLEASE RETURN

POTENTIAL IMPACT ON PHYSICAL ENVIRONMENT

5. Aesthetics

The Motor Vehicle Recycling and Disposal law and regulations require that all junk vehicles and vehicle wrecking yards be shielded from public view. This proposed facility has been screened from public roadways with an attractive solid wood fence approximately eight feet high. The west, south and east sides of the facility are required to be shielded. The north side is not visible from any public roads but the applicant plans to fence it for security and access control reasons.

This facility is approximately .75 acre in size measuring 225 feet wide and 140 feet deep north to south. It will be capable of storing an inventory of approximately 150 vehicles. Stacking vehicles will not be permissible unless fence heights are adequate to shield. Following completion of the gate area along the south fence and removal of junked vehicles outside the fence, this facility will be in compliance with the shielding requirements of state law and eligible for licensing.

A properly screened and maintained motor vehicle wrecking facility does not have a significant aesthetic impact on the environment. Minor problems may occur from vehicles being placed outside the fencing. The small size of the storage lot will limit the size of the operation. The operator will have to manage his inventory carefully in order to avoid "junk vehicle overflow". Junked vehicles as defined by Section 75-10-501 MCA 1979 are not permitted outside the shielded area. License revocation and civil or criminal penalties are remedies available to enforce the shielding requirements of state law.

POTENTIAL IMPACT ON HUMAN ENVIRONMENT

3. Local and state tax base and tax revenue
6. Quantity and distribution of community and personal income
8. Quantity and distribution of employment

The successful operation of a licensed motor vehicle wrecking facility business may have a minor but positive impact on any or all of the above criteria. The applicant currently operates a vehicle towing business and does some vehicle repair work. The addition of a parts salvage business should increase the business opportunities for the applicant and his employees.

10. Demands for government services

The site will require routine field inspections by state and local junk vehicle program officials to assure that it is being maintained and operated in compliance with the requirements of state law. Demands on local government services such as police and fire protection, solid waste disposal and road maintenance should not increase significantly beyond that already necessary to support the existing residence and vehicle towing and repair business.

13. Locally adopted environmental plans and goals

Before a wrecking facility license can be approved or a facility established for licensing, the location chosen for the facility site must be zoned for that use. The mayor of Browning has certified on the license application that the site of this proposed facility is in accordance with local government zoning and ordinances.
